

Myself, G. S. Vijay — Vijay Singh Godara, working on my views about the 'whole' as - information

I am concerning my theory for our's matter life - especially.

I have not studied other life forms till now. But on a very small & ideal level.

So, where there will be some chances, I will also include these.

You will face some problem in the beginning in thinking about that of 'what' the 'informations' are formed but later on you will find that 'what' is also formed from these informations.

All of our present leading scientists working on the basis that - time is in with space and hence they use to say the figure of space - time. BUT

I feel that time is present in - within Matter and not in space. And I will prove this from my theory later.

H

My theory will also express that 'Time' is personal instead of Universal.

'Informations' are the basis of our's. These are the contents of our's at an step.

(The informations are basically basis of our's. Nothing is excluded by these.

These are the content of our's zero step.

★ ★ ★

You will feel that this is my sci-fi work. I will provide the mathematical proof in a proper manner without any hypothesis of my work but why it can't be provided at present is only because of two major causes:-

1. Suitable measurement:-

At present measurement of Space, Time & Matter are not workable for my theory. (its calculation)

2. Lack of Appliances:- The appliances & apparatus at present are unable to perform suitable experiments, what I want.

(Due to lack of our developed Science & Technology).

A. S. Vijay

If I ask you that do you think a bit - of about the step before our's Big Bang or/ the principle behind the Black-hole, — Both of these are serious cause to concern our present leading scientists. what you explain then?

Before our's Big-Bang — the zero step of our's and whole's; the informations was present at that. The leading fact that really concern me is that ~~it~~ b/c of information, space (S) was there exist for the existence of informations — and — appear to be origin-less broadly.

You and — we will be able to define the — Informations — as the heavily expand — precisely.

Informations are of two types  
and not sub-divisible; -

1 Dimensional informations. &

2 Functional informations.

## DIMENSIONAL INFORMATIONS:

These informations constitutes our whole excepting functions. Like - amount of matter, its reference orientation, ~~etc~~ and connections indirectly.

These informations are conserved. defining that matter for our's is conserved. (amount of matter).

## FUNCTIONAL INFORMATIONS:

These informations constitutes of our's functions. These informations are not conserved and may increase and decrease continuously.

randomly, and the cause behind this of there is nothing or/ randomness.

✓ These two informations resist to interact with each other upto a certain limit.

Initially; Dimensional and functional Informations was exist. The dimensional informations was conserved but the functional informations was not and hence the functional informations starts expanding randomly in addition to contracting or/ ending up.

This mechanism of conservation of dimensional informations and expansion of functional information proceeded till the limit exist and then the situation was so critical that these

both started interacting with each other giving rise to 'matter' — the content of our's.

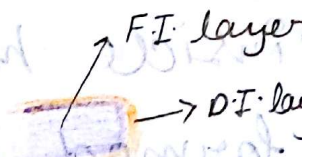

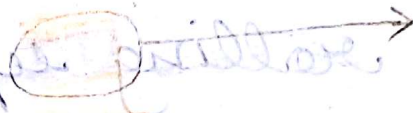

When the limit was overcome due to the infinite expansion of functional informations, the initiation started at the interaction points on the edge boundary of contact.

When these two informations came in contact (interaction initiates), These started to be in layers of two — one is of functional informations and other is of Dimensional informations and started to rolling up in a proper peculiar manner such that the layer of Dimensional informations remain at the surface of roll & the functional informations is in between the rolls.

DI = dimensional inf.; FI = Functional inf.

interaction  
points on  
the edge  
boundary

Side View

Time line is constituted of time points.

This rolling up procedure leaves the expansion procedure of functional informations unaffected.

The functional informations get consumed up in the completion of consumption of Dimensional information and remaining remains with the continuation of expansion procedure.

→ Now, the functional informations inside the hollow tubes (initially formed by rolling up procedure) become continuously increasing and at the centre of hollow tube (whole of the axis of the hollow tubes) the concentration was proceeded and when this concentration crossed a peculiar limit the, concentrated form

of functional informations  
become what is called 'TIME'.

Because; the functional and  
Dimensional informations was  
(& are) repelling, therefore;  
when the mechanism inside the  
hollow tube proceeded, the  
functional informations had  
not forced so move on the  
dimensional informations (outer  
covering of hollow tube) to break  
up the tube instead of the effect  
was move on the axis (centre),  
giving rise to 'TIME'.

The ~~hollow~~ tubes of informations  
as discussed above containing  
'time' itself are called - 'NEERUS'.

Therefore, the Matter (M) is  
constituted of NEERUS & NEERU. //

when the length of NEERUS is so small as  $(\lim_{l \rightarrow 0})$  it's time line is constituted of only one time point it is called NEERU.

Excepting length, whole of the dimensions of the NEERUS are ~~limit~~ limiting  $(\lim_{\rightarrow 0})$  and hence of the the NEERU including length also.

★ Our discussion, above discussed as, proof that 'TIME' is IN-WITHIN MATTER And not in space.

And hence 'TIME' is personal but ~~not~~ automatic. ★

## WHAT IS TIME? ★

Time is the concentrated form of functional information that 'covers' the functions of matter.

→ Time may not be formed in space b/c the space is infinite and hence there is infinitely sufficient for the expansion of functional informations.

~~All of which of an elementary particles are made up of matter and the crystals of matter are also constituted of matter.~~

~~But~~ The most basic elementary unit of which the zero-step

crystals formed are Neerous & \*  
Neerou.

There are many types of zero-step crystals and their quantitative analysis form the first-step crystals.

And then second-step crystals are formed from first-step crystals and then the third-step crystals, ~~called~~ ~~crystals~~ are formed from second-step crystals.

In the zero-step crystals, the Neerous ~~and~~ ~~Neerou~~ are used in a no. of patterns within or without Neerou in b/w constitutes a no. of zero-step particles

which differ in their basic design causes variable properties. \*

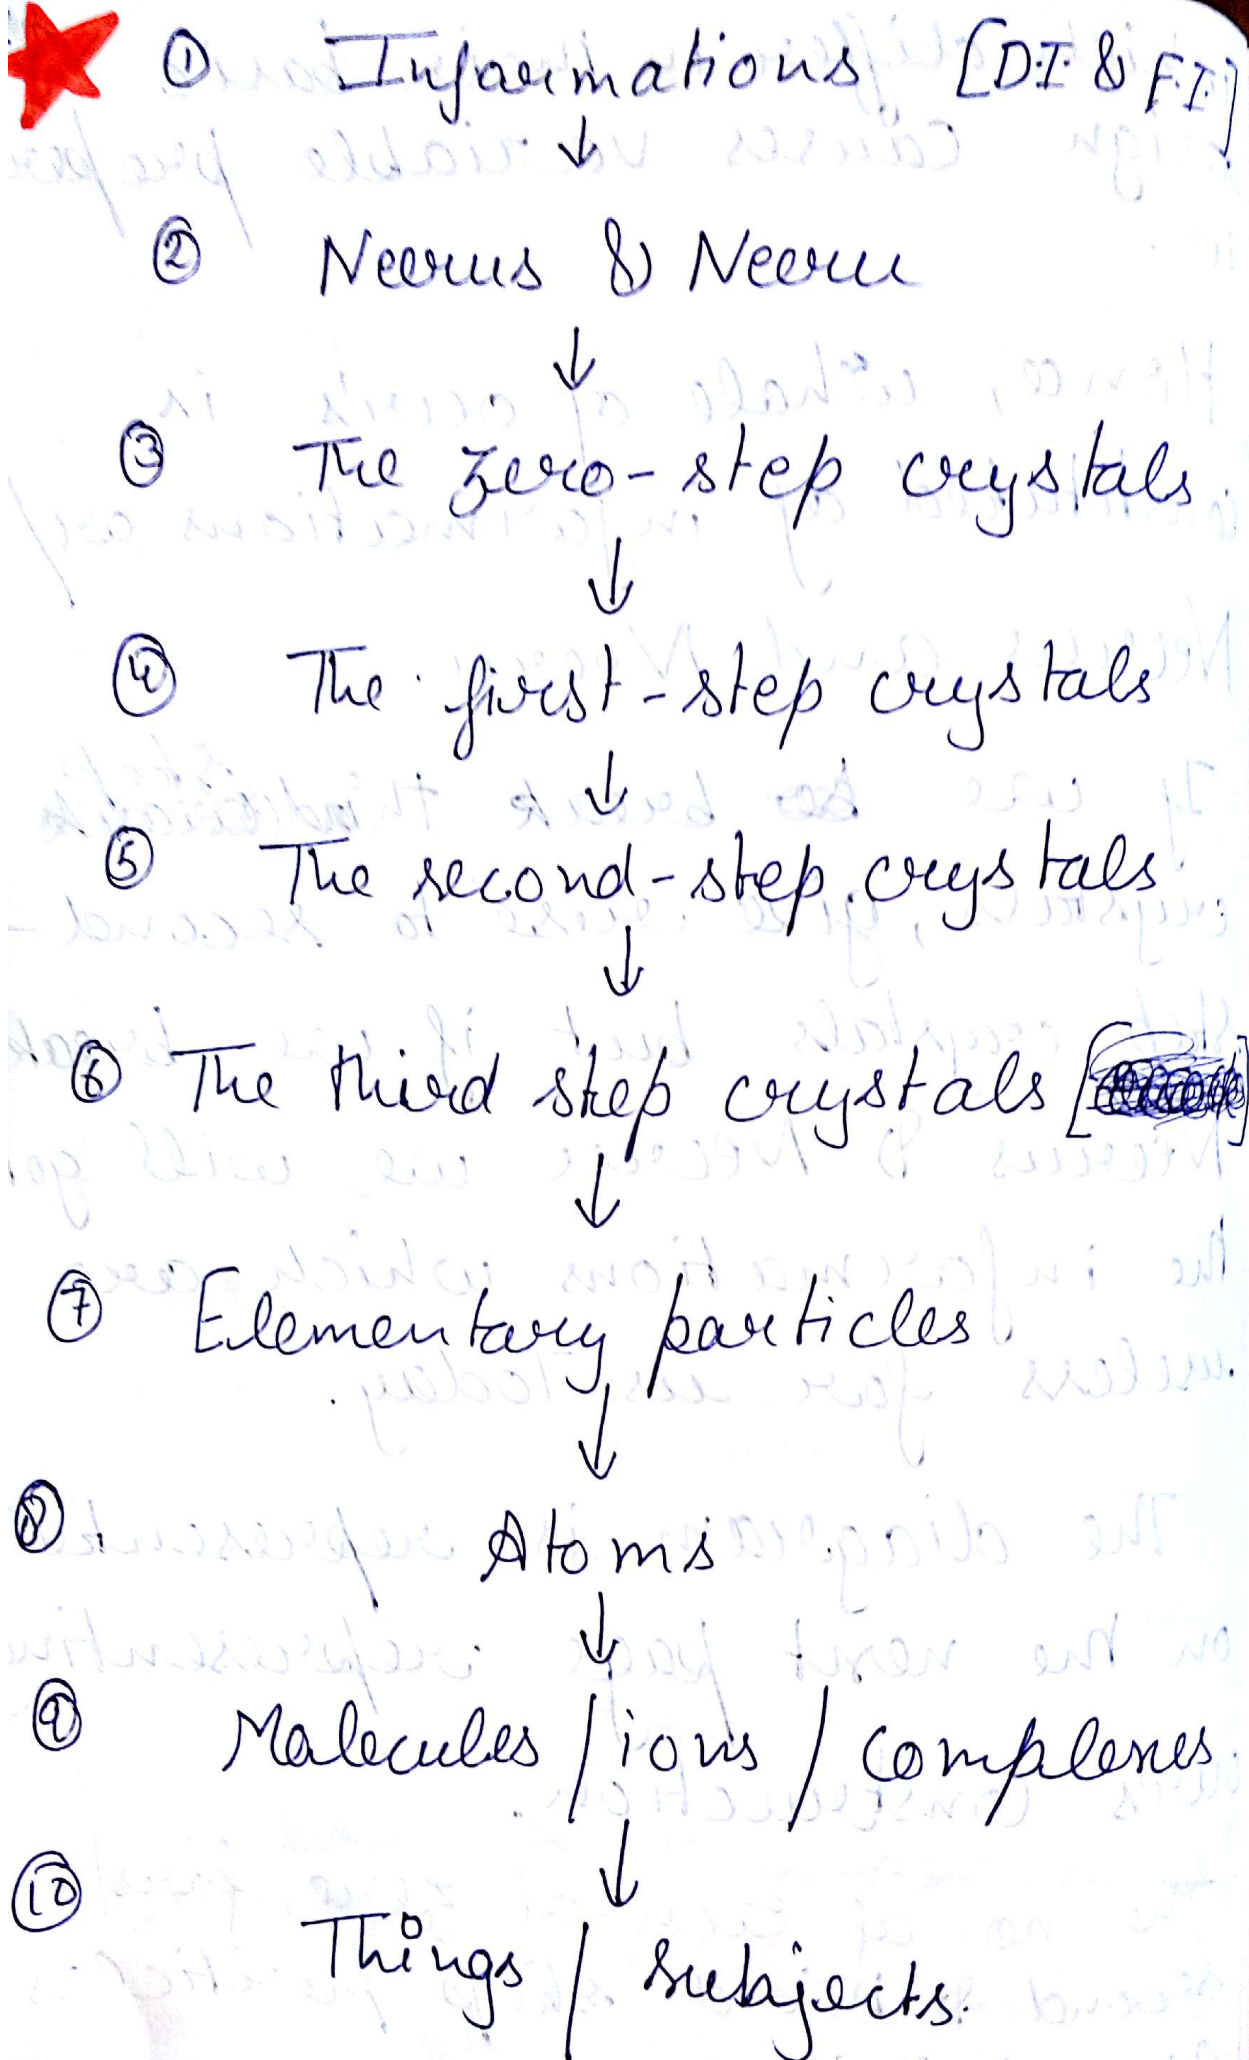

Hence, whole of our's is constituted of informations or Neurons and Neuron.

If we ~~do~~ break third <sup>step</sup> ~~crystals~~ crystals, give rise to second-step crystals but if we break Neurons & Neuron we will go the informations which are useless for us Today.

The diagram is represented on the next page representing our's construction.

The no. of each of zero, first, second & third step particles are infinite.

Our's matter can be interchanged with informations called Dimensional & Functional Informations.

But this conversion seems to be useless for us due to our low developed technology and science. and also we do not have any artificial device for such conversion but is one & unique which is natural whose name & mechanism is discussed later.

what do you prefer to the acceleration of time?

If I argued that the our's time is accelerating up, that means; the amount of time of our's is increasing continuously

~~End~~ As the functional informations are in continuous expanding process giving rise to time's acceleration.

But the serious problem is that the acceleration of time is not uniform for the rate of increasing time or/ expanding functional informations are also increasing.

This is so, because the procedure is dependent of

The amount of functional informations in the surrounding

$$R_f \propto \frac{1}{A_f(\text{surrounding})}$$

where;  $R_f$  = Rate of expansion of functional informations &

$A_f(\text{surrounding})$  = amount of functional informations present in the surrounding.

The accelerating up of time states that the functions performed by our's matters are increasing continuously. and.

In other words, small-&-small amount of matters are upcoming in functions.

## Dissociation of Matter:-

when the matter is formed, the process is endothermic, The energy is absorbed by the dimensional informations in the process of formation of layers & their rolling up, & this energy is provided by functional informations and when the energy of functional informations get ~~consumed~~ up consumed, they become dead and ~~lose~~ lost their existence.

The amount of energy in our matter is constant b/c the informations (functional) which are in matter, constituting time.

But; the functional informations in space are in expanding process and hence, the amount of energy is increasing continuously but it seems to be useless ~~of~~ far as due to lack of our's development.

Secondary informations are those which we can get from the matter particles due to their performances of functions resulting due to functional informations.

Energy can be provided by functional informations but energy may not constitutes functional informations instead

of another informations are constituted called 'secondary informations' which are traceable by us b/c our science & technology is so developed.

---

There is no way for the conversion of functional informations into secondary informations so that these become workable for us leaving; first of all association of matter. ~~and~~ ~~and~~ ~~and~~  
~~and~~

---

Dimensional information may not be converted but when we detect or/ proceeds the

the secondary information, they give knowledge of dimensional information upto a certain limit.

Till Today, we are unable to develop a device which can dissociate matter, but our nature have this type of device and it is unique called - Black Hole.

Black hole is the phenomenon or device which dissociates matter and differentiates it in two : dimensional and functional informations.

Black holes have storage for the dimensional informations & since these two informations

are repelling, hence, the functional informations are transferred into the space.

Hence, since, there is no functional informations inside the black holes and hence no Time.

Black - holes are detected now-a-days by ~~measuring~~ their effects due to presence of dimensional informations within; like gravity & also what they cause to surrounding

At the instant, when the matter dissociates by a Black hole, the time get converted into secondary informations.

And the functional informations inside the matter other than time's get out of black holes as the functional informations.

As the amount of F.I. near a Black hole is a lot different than in general space, that's why when a matter came in it's surrounding the functions which are the result of TIME get changed considerably. Because the expansion of F.I. which constitute TIME is dependent of the amount of F.I. in surrounding. (P-20).

Black holes are the only - universal references - precisely. Black-holes do not change their position with time in space.

Black-holes are caused due to a peculiar nature of space fibre at that point, its orientation - relatively - which then collectively display the property of Black-hole.

## Mechanism of forces:-

It is observed that forces are also due to particles.

Since, the functional information are in expanding process and hence increasing the energy of matter to perform functions.

The basic unit of matter are 'Neerus & Neerue'.

When the energy cross a definite limit and hence time, the particles starts escaping.

As usual first of all the Neerus & Neerue, then zero step, then first step & then finally second step crystals escape.

Third step crystals do not escape, in general due to their large size.

Particles of same type interact with each other & cause to act force.

Neutrons & Neutrons are responsible for strong nuclear forces.

B/c of their  $\lim_{\rightarrow 0}$  size, they have greater extent of escaping but they are strongly & rapidly absorbed by the matter present nearby. This is also due to  $\lim_{\rightarrow 0}$  sizes; these two factors make the strong nuclear forces of ~~high magnitude~~ high magnitude but up to small extent.

zero-step crystals are responsible for weak nuclear forces. only one type of, out of infinite type of 0-step crystals are responsible, what other cause is beyond the scope now.

B/C 0-step crystals are some-what less escape than neutrons & neutrinos and also slightly (limiting) less absorbed by the matter present nearby causes — weak nuclear forces are less in magnitude & their extent increases in comparison to strong nuclear forces.

- First-step particles are responsible for electric & magnetic forces. (electromagnetism) Out of infinite no. of first-step crystals, only two — one causes electric & other causes magnetic forces, the work of remaining is out of our's trace & scope.

Since, no size of first step crystals are large enough therefore, there are less escape & less absorbed by matter present nearby & hence, electric & magnetic forces are of moderate strength & of moderate extent.

• Second-step crystals are responsible for the gravitational force.

Out of infinite, only one type of are responsible.

Since, second step crystals are of large size hence less escape & less absorbed by the matter present nearby. Therefore, the gravitational forces are of low magnitude & high extent.

Generally, in the interaction, ~~which~~ which leads force, the matter, in order to absorb peculiar particles attract towards the source.

On accepting more and more peculiar constituents, they try to minimize their own escaping phenomena.

10/01/16

The reference frame chosen in today's world, for the measurements like displacements, positions, etc should be Black-Holes (any one). Since Black-holes are the property of space & hence they are precise reference frame

## - Beyond the God -

If I ask you, why the universe exist? What will you explain.

If someone ask me, the same then, I will explain -

'The universe exist b/c the informations had started-up their interaction, randomly. which creates matter results in the existence of universe.'

Then, why the informations were existed? - Same will also ask. -

This is b/c 'the informations can not loose their existence' or It can also be understand in the way-that - 'Things from nothing is impossible event' it's converse is also ~~true~~ true.

"The last stage of the existence is information & hence at least

there have to be exist."

If I ask you, what the universe  
is? What will you explain?

If someone ask me, the answer  
is, I will explain -

The universe exist b/c the  
information had started up

their interaction, everything  
which creates matter & energy

the existence of universe  
then, what the information

are existed? - Some will also  
ask -

is b/c the information  
not lose their existence of

can also be understood in  
way that - things from

thing is impossible event, it's  
not true.

## The theory excepting nothing

Everything is matter (M) requires space (S) to exist and perform functions through time (T).

All the universe is consist of matter, its orientation in different forms create different things, the universe or matter (M) requires space to exist. If there is no space then no matter (M) b/c it will lost its existence, the informations also require space for their existence. If no-space then, is nothing. Matter (M) perform functions in space ~~to~~ through time (T). If no-time exist then matter will exist but not perform functions & hence seems to be lost its existence.

Because, if time do not exist, what exist is said to be impossible event exist.

And, there is no probability for impossible event.

So, By knowing the relation b/w Matter (M), Space (S) & time (T), we can unify the universe. Nothing will be unpredictable.

Time-machine seems to be impossible event without the relation 'MTS' but a serious problem is to find out suitable parameters of Space (S), time (T) & Matter (M), first of all.

In this procedure, the precise knowledge & calculations requires after, the establishment of 'MTS', we will lost the existence of God. Then we will God.

Matter (M) is volatile in its orientation, Time (T) is flexible but space (S) is rigid.

I wanna to dedicate my life for work on the establishing of the relation 'M.T.S'. Because; the stabilizer will be 'god' and I want to be.

My theory reveals the major question which if published will revolution the world of Scientists working on the project - 'TIME MACHINE'.

The question is

- "From where the time come & to where it go?, we only experience it at an instant only."

In general outstanding words:-

From where our present come or/where our future exist & where our present go or/where our past exist?

Accordingly,

The time exist instantly. To which we experience or/through which it the matter perform functions. Before & after, it ~~lost~~ its existence.

In general outstanding words,

Only our present exist, Our

future & our past does not  
exist.

~~Satur~~

## → Concept OF 'END'

### LOSS OF PERSENT EXISTENCE.

As we know, a large no. of scientists are worrying about the end of our universe/our life.

As our universe is constituted of matter, will lost its existence on the dissociation of matter.

As discussed earlier, 'Black-holes' dissociate matter into its constituents informations, (functional & dimensional).

Functional informations get escaped from black-holes & Dimensional informations collect up in the black-holes. This mechanism proceeds with the evolution of secondary-informations which are the results of the ~~to~~ TIME of matter at the instant of dissociation.

Our present universe will end when matter will lose its existence i.e., get consumed by black hole.

Whole of our universe (matter) will get converted into its basics.

Again the mechanism of interaction of information & formation of matter will take place and proceed further.

Hence according to my theory the existence of universes is a two-step process.

But, every time in the next stage of universe, the limiting energy is greater than in previous stage. Let if the total energy of our present universe be 'x', (which is consumed) & let 'y' be the total energy of the

next stage universe, then 'y' will be greater than 'x', always.

The cause behind this increase in energy for every next stage universe will be not understand by you, if I keep in what my concepts. So, I'm finding the simple manner to describe the cause so that you can understand.

As I got it, I will explain it

## EFFECT OF INCREASED LIMITING ENERGY OF EVERY NEXT STAGE UNIVERSE:-

For every next stage universe the amount of limiting energy is greater than of previous stage universes. Then, what is the effect of this increasing energy?

As we have discussed earlier that in actual mean, the energy is 'TIME'.

Hence, in a slightly peculiar way, due to increasing energy (limiting), Since matter 'M' is constant due to the conservation of Dimensional Informations, the acceleration of time 'T' is great & greater for every next stage universe.

Due to this; the ability of matter  $\propto$  to perform functions

keeps on increasing. In this manner, every next stage universe become more Bumptious than previous stage universe.

The 'lap' [I'm not saying: time-lap; Space-lap, or/ matter-lap] b/w the existence of a 'stage universe' & just it's next stage universe' is not constant. It vary step-to-step or/ stage to stage.

And, this lap is decreasing continuously for every following stages due to the increasing of functional informations.

# ELECTROMAGNETIC WAVES REALITY AND ALSO OF ALL:

- Nothing is said to be a wave.  
Everything is made up of crystals  
or/ particles of certain types.

The Electromagnetic waves  
(what we called it) are constituted  
of first step particles. The particles  
move forward not in rectilinear  
path but with vibrating in the  
planes  $\perp$  to their rectilinear  
(hypometrical) line of motion.

⇒ why they do not move in  
rectilinear path & why wave  
path is followed?

Since earlier discussion shows  
that the creation of functional  
information constitutes present  
& it follows that:

$$R_f \propto \frac{1}{A_f}$$

& also stability is inversely prop. to the rate of expansion of functional informations  $R_f$ , (already discussed).

$$\therefore \text{Stability} \propto \frac{1}{R_f} \propto A_f$$

$$\therefore \text{Stability} \propto A_f$$

;  $A_f$  = amount of functional informations present in the surroundings which can be said to be amount of matter for our ~~convenience~~ convenience.

$$\therefore \text{Stability} \propto \text{amount of matter}$$

Ex: i.e., My wrist-watch is less stable in comparison to me in our universe.

Since, the particles vibrate (shows frequency) to get stability therefore, the particles with low

amount of matter are less stable & hence must show more frequency of frequency hence less wavelength in comparison to particle/object with more amount of matter which will shows low frequency & high wavelength.

[\*\* In my theory, the amplitude of vibration is directly proportional to the frequency & hence.

amplitude of vibrations  $\propto \frac{1}{\text{wavelength}}$

All matter particles follows the rules, above discussed.

Whole of the Em-waves since made up of particles also follows above discussion.

Each Em waves related to different wavelength & frequency constituted of different first step particles.

✓ I think that the major difference b/w the transparent & opaque objects is that transparent object consisting of first step particles in amount enough such that when a first step particle corresponding to visible region carrying informations is incident on its surface, a identical particle is ejected with identical informations from the other side since it has no. vacent for it; give rise to transparent effect.

Whereas in Opaque objects, they consisting of first step particles in amount such that when a first - step particle is incident on its surface, it remained, since it has vacent for it.

In transparent, incindention on one surface & emission from

opposite are simultaneously  
precisely & hence the information  
do not lost But in case of  
opaque the emission will  
be after some - lap & during  
that informations lost & hence  
we lost their detection for  
visual effect.

In translucent everything  
runs on moderate.

[it's for you?]

# ENERGY & A VIEW OVER

What the reality of Energy:-

when we will say that — only energy exist.

An object what perform is not only due to its single particle or/ whole of the constituents of an object do not leads to same; every stands-far differ.

But what object perform is the resultant. of constituents.

when all the constituents (what may be it) become at a stage such that what they lead for, can be detected, in other words; when all the basic constituents of matter become

# ENERGY & A VIEW OVER

influenced-less of each other;  
we say that only what left  
is - ENERGY.

According to Einstein's eq<sup>n</sup>:

$$E = mc^2$$

The energy from any group of matter ('m') can be obtained, what need is only high temp. enough so that all basic constituents become free from the influence of each other & at this stage their unique functions can be detected.

Since, when get at this stage, our's basic constituents perceive the ability to penetrate the Space with change @ 'c'

hence, Einstein's eq.<sup>n</sup>  $[E=mc^2]$   
is dependent of 'c'.

~~VS~~  
~~Q.S. Ujjain~~

~~Q.S. Ujjain~~  
~~Q.S. Ujjain~~

→ If the relativity velocity of a group of matter particle (object) does not exist according to a frame of reference (say J) & hence of overall (object) then the energy posses by it will not exist by the frame of reference J; No matter what is the energy type you are discussing about.

In other words; If a material is consider to be constituted of only single basic. (i.e considered to be a single particle) & its velocity with respect to a frame of

reference is zero, the energy passes by the marbles will be also zero. (all energies will be zero).

If the maximum possible velocity of the same marble according to a frame of reference (say J) is 'V' then ~~why~~ what by you about its energy? (maximum possible).

⇒ Its maximum possible energy according to the frame of reference J will be given by  $E_J = mV^2$ ;  $m$  = mass of the marble.

Hence; the maximum energy possessed by an object will be given by  $E = mV^2$ ; where  $V$  is the maximum possible velocity of the constituents of object in last isolated state.

---

★ ★ Please note the spelling mistake  
★ marble = marble = ~~ch-IT~~ = a glass ball.

The concepts discussed earlier seem to exist for everything even though its physical existence seems to be or not to be. At most - last constituents will found to be NEERU & NEERUS. ★

Directly there is no relation of maximum possible energy by mass with temperature. But it is existing indirectly since increase the maximum possible velocity of the matter.

The eq<sup>n</sup>  $E = mv^2$  can also be expressed in the form of temperature dependent using certain calculations.

## ★★) - General Manipulation -

Some do not require frame of reference for their manipulation. Such are those which do not pass relativity become zero with respect to any frame.

One such, out of them is Functional Informations (FI).

Such, because always have a non-zero relativity & hence do not require a unit for manipulation.

But the important thing to be note is that the unit of others after manipulation of result get certainly changed.

[ V.S.G. ]

G.S. Vignay  
24/07/15

Presenting today after a time period of about 4-5 months. Due to involvement in the sen. sec. exams & living with tension of further admission as is not resolved till today for what I want.

⇒ A clear thing emerging from our previous discussion is - 'if a matter is situated in the conditions such that nothing is exchanging with the surrounding precisely (i.e., crystals/step particles & fundamental ones) then it will not experience any force & change in energy & precisely also will not be responsible for the same in surrounding.'

'For matter forces of all-types depends on the exchange of step crystals & fundamental ones, & their exchange'

for matter depends on the surrounding only and only precisely.'

Hence, for matter all the forces are dependent of surrounding—what is against the today concept.

To deal with forces precisely we need a different & specific equation which should be dependent of surrounding also.

⌞ The functions performed by the matter are the precise results of the forces or/ the combination of forces.

Hence, for matter the functions are dependent on the exchange of step crystals or/ fundamental ones—only.

The matter performing functions constitute — 'present'; what matter will perform called — 'future' & what have been performed by matter called — 'past' & past, present & future collectively constitute — 'time'.

Since, 'time' is constituted by the performance of functions by matter which (functions) are the results of forces or/ the combination of forces & forces are only due to the exchange of step-crystals and the fundamental ones which is dependent of ~~surrounding~~ surrounding; therefore the functions performed the matter & hence time (past + present + future) are the results of the surrounding.

By affecting the surrounding or/ by operating the device having ability to affect the exchange of step crystals & fundamental ones, the constituents of time can be affected precisely — what clears the way of time machine.

# BLACK HOLES — The secret revealing

As the result of our scientist's calculation, black holes have the gravitational pull — the strongest one out of all matter's.

As we have discussed earlier, the gravitational forces are due to the exchange of second-step crystals, & the crystals escape when the TIME due to the F.I. crosses a certain limit.

Since, there is no matter inside the black-hole (only D.I. exists) and hence no. crystals of any step & also no. neutrons & neutrinos; therefore a black hole can not exchange any types of crystals that's why precisely, the gravity of a black-hole does not exist.

My theory clearly reveals that there is no gravitational force of/on a Black-hole.

As is clear - my theory oppose the present leading scientists.

MECHANISM:- In a Black-hole, no F.I. exists and when ~~a~~ matter arrives inside the black hole, no F.I. in the surrounding ( $A_f$ ) exist the F.I. of the matter which constituted 'time' follows our equation discussed earlier;

$$R_f \propto \frac{1}{A_f}$$

$\therefore A_f = 0$  inside the Black holes,

$$\therefore R_f = \infty$$

Hence, when matter is inside the Black-hole, the F.I. expand at infinite rate; in this condition

the nucleus & neuron explodes, because the dimensions of time-line increases at infinite rate & finally the matter get dissociated into F.I. & D.I.

THEN;

The D.I. remains there & F.I. move out of the Black-holes. & the TIME get converted into secondary informations.

ATTENTION PLEASE:-

The 'time' get converted into the secondary informations — the statement what means, I explains →

At an instant (TIME) the matter dissociates & the F.I. came out of Black holes which change the value of  $A_j$  for the matter present which then alter its function — get traced by us — we got the secondary Informations.
